Professional Summary

Results-driven Computer Science graduate with hands-on experience as a Data Analyst Intern, skilled in Python (Pandas, Scikit-learn), SQL, Power BI, and Tableau. Built and deployed ETL pipelines and predictive models with up to 90% accuracy across 40K–195K+ record datasets. Delivered interactive dashboards that reduced manual reporting by 40% through clear data storytelling for both technical and non-technical stakeholders. Familiar with Azure data ecosystem and committed to data governance best practices. Passionate about stakeholder management and translating complex data into actionable business insights.

Education

JNTUH College of Engineering Sultanpur

Bachelor of Technology in Computer Science and Engineering

Hyderabad, TS

Nov 2021 – Aug 2025

Sri Chaitanya Junior College

TSBIE

Hyderabad, TS

Jun 2018 – March 2020

Experience

Data Analyst Intern

Edgenius Skillfied Mentor Private Limited

Hyderabad, TS

Feb 2026 – May 2026

- Banking Data Analysis: Designed and published an interactive Power BI dashboard tracking campaign KPIs across 4,640+ subscribers — built on a Python-based ETL pipeline for data extraction, transformation, and loading — enabling stakeholders to monitor conversion trends and segment performance in real time, reducing manual reporting effort by ~40% through effective data storytelling.
- Colorectal Cancer Survival Analysis: Analyzed 1,000+ patient records and constructed a survival prediction model achieving 85% accuracy and 0.87 ROC-AUC — adhering to data governance and privacy best practices by anonymizing PII before analysis — identifying key mortality risk factors to support data-driven clinical decisions.
- Diabetes Risk Prediction: Architected a machine learning-based diabetes risk prediction system on 750+ clinical records, delivering 89% accuracy and enhancing early high-risk detection by 25%. Presented findings to clinical stakeholders through an executive Power BI report, demonstrating strong stakeholder management and data storytelling skills.

Projects

Full-Stack Data Analytics Capstone | SQL, Excel, Python, Power BI, Tableau

- Built a cross-platform Road Accident Analytics solution using an end-to-end ETL pipeline in PostgreSQL, Power BI, and Tableau on 195K+ casualty records. Delivered validated KPI dashboards with YoY trend analysis and geospatial risk mapping — presenting findings to simulated stakeholders with a focus on data storytelling and actionable insight communication.
- Demonstrated BI platform flexibility by replicating the same analytics solution across Power BI and Tableau — enabling stakeholders to choose reporting tools based on team preference without losing insight quality.
- Queried and transformed raw accident datasets using PostgreSQL — filtering 50K+ records by severity, location, and time period to feed clean, structured data into Power BI and Tableau dashboards.

Airbnb Listings Analysis | Python (EDA)

- Conducted data cleaning, EDA, and pricing analysis on 5,000+ listings to support market and revenue insights.
- Applied hypothesis testing and statistical analysis across 300+ room types to identify peak demand drivers — translating findings into pricing recommendations that supported a 15% projected increase in seasonal bookings.

Technical Skills

Languages: Java, Python (Pandas, NumPy, Scikit-learn), SQL (PostgreSQL), C/C++, HTML/CSS

Databases: PostgreSQL, MySQL

Business Intelligence: Power BI (DAX, Power Query), Tableau

Data Analysis: EDA, Statistical Analysis, Hypothesis Testing, Data Wrangling, Data Modelling

Machine Learning: Regression, Classification, Feature Engineering

Cloud & Governance: Azure, ETL/ELT Pipelines, Data Governance principles

Tools: Excel (Pivot Tables, XLOOKUP), Git, Jupyter Notebook
